Professional Summary

Full Stack Engineer shipping across web (React, Next.js), backend (NestJS, Express, MongoDB) and mobile (Flutter). At **Vela1** I designed and built the offline-first sync layer of a point of sale in production, and a multi-brand salon customer app from scaffold to payments. I care about correctness where money and identity are involved; I work test-first.

Technical Skills

Frontend: React, Next.js, TypeScript, Vite, Tailwind CSS, MUI, Zustand

Backend: Node.js, NestJS, Express, MongoDB / Mongoose, REST, Zod, Swagger

Mobile: Flutter, Bloc, GoRouter, Drift (SQLite), offline-first sync, push notifications (FCM), Capacitor (Android)

Security and payments: JWT, TOTP 2FA, Passkeys, multi-tenant isolation, rate limiting, MercadoPago, card terminals

Quality and delivery: TDD, SDD (spec-driven), Jest, Vitest, flutter_test, GitHub Actions, Vercel, Sentry, Electron

Professional Experience

Full Stack Engineer, Vela1 (Contractor)

Feb 2026 to Present · Remote

VelaHair: salon customer app, my main focus (Flutter, Bloc, Drift) · *Aug 2026 to Present*

- Led discovery and design (research, screens, v1 and v2 prototypes), then built the app almost single-handedly: per-salon theming, invite links and QR, booking with holds and deposits, rewards, referrals, offline cache, EN/ES/KO.
- Built what the app needs on the VelaStudio platform: **NestJS and MongoDB** backend (cross-salon identity ADR, OTP rate limiting, concurrency and authorization fixes pinned by e2e tests) and the web pages that open the app.

VelaGo: mobile point of sale in production (Flutter, Bloc, Drift) · *Mar 2026 to Present*

- Researched and proposed the local storage and sync architecture (approved by the team), then built it: **SQLite via Drift**, a **durable outbox** so charged sales survive network loss, migrations up to v8, and a sync engine with rejection parking, dependency ordering and incremental pull.
- Card terminal payments (split, tips, settlement), returns, exchanges and cross-terminal locking of held orders.
- Proposed and designed the UI redesign (approved by the team). Main developer: about two thirds of the commits.

Merchant Portal (Business Platform) and storefront · *Feb 2026 to Jul 2026*

- Web apps in **React 19 and Next.js 15**: store settings, checkout, and a receipt and KDS editor with live preview.

Full Stack Developer, TireOps (Freelance)

May 2025 to Present · Remote · Fleet tire management software in production

Sole developer of the whole product: Node.js backend, Electron desktop app and React web apps.

- Turned a desktop app into a **multi-tenant SaaS**: one database per company, tenant resolved from the signed JWT.

Full Stack Developer, Artemisa (Freelance)

Sep 2024 to May 2025 · Remote · **MERN** e-commerce with **MercadoPago** payments and a simple stock ERP

Key Projects

Verōk: shared finance platform

Personal product in production · Next.js · MongoDB · Capacitor (Android)

- **TOTP 2FA**, **Passkeys**, AES-256-GCM field encryption, FCM push, a signed updater and CI with **629 tests** (Vitest).

Education and Languages

Full Stack Developer, CoderHouse (2023 to 2025), top 10% by grades and performance

Electronic Engineering (3 years, incomplete), UTN · **Languages:** Spanish (native), English (B2)
