SKILLS

Frontend: React, Next.js, TypeScript, Vite, Tailwind CSS, MUI, Zustand

Backend: Node.js, NestJS, Express, MongoDB / Mongoose, REST, Zod, Swagger

Mobile: Flutter, Bloc, GoRouter, Drift (SQLite), offline-first sync, FCM push, Capacitor (Android)

Security and payments: JWT, TOTP 2FA, Passkeys, multi-tenant isolation, rate limiting, MercadoPago, card terminal payments

Quality and delivery: TDD, SDD (spec-driven development), Jest, Vitest, flutter_test, GitHub Actions, Vercel, Sentry, Electron

LANGUAGES

Spanish: native

English: B2

EDUCATION

Full Stack Developer, CoderHouse (2023 to 2025, top 10%)

Electronic Engineering, UTN (3 years, incomplete)

Full Stack Engineer

PROFESSIONAL SUMMARY

Full Stack Engineer shipping across web (React, Next.js), backend (NestJS, Express, MongoDB) and mobile (Flutter). At **Vela1** I designed and built the **offline-first sync layer** of a point of sale now in production, and a multi-brand salon customer app from scaffold to payments. I care about correctness where money and identity are involved, and I work test-first.

PROFESSIONAL EXPERIENCE

Full Stack Engineer, Vela1 (Contractor)

Feb 2026 to Present · Remote

VelaHair: salon customer app, my main focus · Aug 2026 to Present

- Led discovery and design (research, screen design, clickable v1 and v2 prototypes), then built the app almost single-handedly: per-salon theming, invitation deep links and QR, booking with holds and deposits, rewards and referrals, offline cache, EN/ES/KO.
- Built what the app needs across the VelaStudio platform: **NestJS and MongoDB** backend (cross-salon identity model as an ADR, OTP rate limiting, concurrency and authorization fixes pinned by e2e tests) and the web pages that open the app.

VelaGo: mobile point of sale in production · Mar 2026 to Present

- Researched and proposed the storage and sync architecture (approved by the team) and built it: SQLite via Drift, a **durable outbox** so charged sales survive network loss, migrations up to v8, and a sync engine with rejection parking, dependency ordering and incremental pull.
- Built card terminal payments (split, tips, settlement), returns and exchanges, and cross-terminal locking of held orders. Main developer: about two thirds of the commits.

Merchant Portal (Business Platform) and storefront · Feb to Jul 2026: web apps in React 19 and Next.js 15 (checkout, receipt and KDS editor).

Full Stack Developer, TireOps (Freelance)

May 2025 to Present · Remote · In production · Sole developer

- Turned a fleet tire management desktop app into a **multi-tenant SaaS**: one database per company, the tenant resolved from the signed JWT.

Full Stack Developer, Artemisa (Freelance)

Sep 2024 to May 2025 · Remote · MERN e-commerce · MercadoPago

KEY PROJECTS

Verōk: shared finance platform

Personal product in production · Next.js · MongoDB · Capacitor (Android)

- **TOTP 2FA**, **Passkeys**, AES-256-GCM field encryption, FCM push, a self-hosted signed updater and CI with **629 tests** (Vitest).
